

Discover the unparalleled expertise of Titanium Energy Services, a unique multi-services company with a wealth of experience in the oil & gas industry. Our pumping services division is growing its chemical injection services specializing in coiled tubing support and acidizing. Our growing fleet of chemical injection equipment is strategically stationed in our various locations to service across Western Canada.

Equipment Specs:

- 4x Changeable totes
- 2x Chemical Pumps (0.25L/min - 30L/min)
- 2x Chemical Pumps (0.25L/min - 41L/min)
- Ability to pump well servicing fluids and chemicals
- Operator cab c/w full data acquisition
- Raised totes for spill containment
- Heated enclosure for winter operations

CHEMICAL INJECTION PUMPING SERVICES

Purpose

The enclosed chemical injection unit serves to support pumping and coiled tubing operations by continuously injecting chemicals into the fluid being pumped. It ensures accurate dosing of chemicals and maximizes their effectiveness. Additionally, the unit enables Titanium to transport a wider range of chemicals to and from job sites, with the added benefit of being heated for winter operations

Capacity

The Chemical Injection unit has the capacity to transport four 1000L totes containing various chemicals pertinent to coiled tubing operations. Totes can be swapped based on job requirements and customer preferences. They are elevated off the floor for convenient cleaning.

Pumps

The chemical injection unit is equipped with two AMPCO 006 chemical injection pumps, capable of pumping 0.25L/min to 30L/min each, and two SPX 015 U2 chemical injection pumps, which can pump between 0.25L/min to 41L/min each. All pumps and hoses are pressure rated to 200 psi.
