MILL OUT SOLUTIONS

Explore the power of integrated Mill Out solutions, combining Titanium Coiled Tubing with Fluid Pumping services to effectively eliminate obstructions or debris from your wellbore or completion equipment. Our approach involves utilizing a precision milling tool, meticulously assembled, rigorously tested, and seamlessly run into the wellbore, to mill out debris, ensuring a clean and optimized operational environment.

Trust Titanium Energy Services for a comprehensive Through Tubing Cleanout solution, offering efficiency, minimal downtime, well integrity preservation, operational flexibility, and enhanced well performance. Experience the value of a tailored approach for maintaining and optimizing your oil and gas wells.

Key Benefits

Efficient Removal: *Integrated Coiled Tubing and Fluid Pumping solution ensures effective removal of downhole tools, using precision milling tools for precise and thorough extraction.*

Pristine Environment: *The methodical milling process for removal of all obstacles from the wellbore, creating a clean and finely tuned operational environment that enhances overall efficiency.*

Seamless Performance: *Trusting Titanium for downhole tool removal delivers a comprehensive and tailored solution that promotes seamless and efficient well performance*

MILL/DRILL OUT

INTEGRATED SOLUTIONS

Coil Tubing Unit

The coiled tubing is run into the wellbore using environmentally friendly solvents to remove sand, scale, wax, proppant and other debris from the wellbore.

Fluid Pumping Unit

Skilled professionals with high-rate, high-volume fluid pumping equipment that are capable of up to 10,000*PSi*. and pump rates up to 1m^3*/min*.

Nitrogen Pumping Unit

A competent N2 professional equipped with mobile liquid nitrogen pumping equipment to inject nitrogen with fluid to keep the hydrostatic pressure lower than bottom hole pressure to avoid loss of returns, and to purge the coiled tubing string at the end of the job.

Catch Tanks

Titanium's Energy Services offers catch tanks for returns to capture fluids, debris, or other materials that are pumped out of the well during well interventions.
