

Discover the unparalleled expertise of Titanium Energy Services, a multi-service company with a wealth of experience in the Oil and Gas industry. The Titanium Energy Services fleet of Nitrogen Pumping units include Nitrogen Super Pumpers replacing about five conventional high-rate trailer units reducing the operational footprint and logistical requirements needs servicing Western Canada.

## N<sub>2</sub> SUPER PUMPER:

- 5000 Horsepower
- 90scm/min Minimum Flow Rate
- 2000scm/min Maximum Flow Rate
- 10k PSI Maximum Pump with 15k PSI Iron
- 3 Direct Fired Flamed Heat Dischargers
- **Equipped with**
  - Support Unit with Picker
  - Bulk Fuel Truck
  - Iron Trailer
  - Mobil Tank Farm (as required)

## N2 SUPER PUMPERS

Coalbed Methane (CBM) is a sweet gas found within coal seams and is considered a clean source of natural gas. However, many formations require stimulation to extract this resource effectively. CBM fracturing uses dry nitrogen gas to crack the formation, allowing the coal to act as a natural proppant, thereby maximizing production.

With Titanium Energy Services' specialized pumping and coiled tubing equipment, CBM stimulations have become more productive than ever. Titanium's smaller operational footprint can perform tasks that previously required multiple pieces of equipment and a larger labor force.

Introducing Titanium Energy Services 5000-horsepower high-volume Nitrogen Super Pumper, capable of pumping nitrogen from 90scm/min to 2000scm/min using three direct fire heat dischargers. One of Titanium's Super Pumpers can replace about five conventional high-rate trailer units, reducing the operational footprint and logistical requirements.

This means increased production, efficiency, and safety, with fewer people and equipment on location, reducing the risk of incidents, injuries, and downtime.
