

Discover the unparalleled expertise of Titanium Energy Services, a multi-service company with a wealth of experience in the oil and gas industry. The Titanium Energy Services fleet of truck or trailer mounted coiled tubing units include a variety of equipment from shallow, deep-hole, e-coil and mast units to provide solutions for energy producer well intervention & abandonment needs servicing Western Canada.

## MASTED E-COIL UNITS:

- **Operator Control Cab** equipped with
  - *Real-time Data Acquisition System*
  - *Full PLC & Hydraulic Controls*
  - *Electronic Gauge Cluster & BOP Controls*
- **80k Injector Heads**
- **5" 10k Dual Combo Hydraulic BOP System**
- **5k Quick Strip PC System**
- **15k Pumping Manifold**
- **Support Vehicle *with* Knuckle Picker**
- **All Hand Union/Flanged PCE *as per* IRP 21**

## Coiled Tubing Units

Titanium Energy Services offers a comprehensive range of coiled tubing units to meet various well servicing needs, including water wells, disposal caverns, exploration wells, injection wells, geothermal wells, and oil & natural gas industrial wells.

Our fleet is equipped to handle cold flow and thermal SAGD applications, as well as horizontal and slant well servicing operations. The specialized units include shallow, deep-hole, e-coil, and mast units, each tailored for specific well intervention and abandonment requirements.

Shallow units are ideal for servicing shallow wells with flexibility and ease of deployment, while deep-hole units are suitable for deep well operations, ensuring effective intervention in deeper reservoirs. E-coil units combine the benefits of wireline and coiled tubing, allowing for precise deployment of downhole tools, enhancing performance for various applications. Mast units provide structural support, ensuring safety and stability, especially in complex operations.

Titanium Energy Services ensures efficient, safe, and effective well intervention and abandonment, tailored to the diverse needs of energy producers
